File: USPT

Jun 30, 1998

US-PAT-NO: 5774828

DOCUMENT-IDENTIFIER: US 5774828 A

TITLE: Mapless GPS navigation system with user modifiable data base

DATE-ISSUED: June 30, 1998

INVENTOR-INFORMATION:

NAME	CITY	STATE	ZIP CODE	COUNTRY
Brunts; Randall T.	Carmel	IN		
Welk; Douglas Lynn	Rossville	IN		

US-CL-CURRENT: 701/210; 340/990, 340/995.24, 340/995.26, 340/995.27, 701/200,
701/208

CLAIMS:

What is claimed is:

1. A mapless navigation system with a user modifiable data base for adding data, including coordinate data, to previously stored data and for recalling the data, said mapless navigation system comprising:

a position sensing receiver for receiving position information and determining a current position thereof;

a user modifiable destination data base internal to the navigation system with programmable memory for adding information to existing destinations to the data base and for adding coordinates of and other information regarding new destinations including said current position as a new destination to said data base;

user interface means in said system for accessing the user modifiable data base, for adding said information to the user modifiable data base, and for recalling database information, including the added information on destinations;

user selectable input means for selecting a desired destination from the user modifiable data base, including the destination added by a user of the data base;

processor means for determining a distance and a direction from the determined current position to the selected desired destination; and

a mapless display for displaying said distance from the current position to the selected desired destination, and a direction pointing indicator in said display for indicating said direction from the current position to the

selected desired destination.

2. The navigation system as defined in claim 1 wherein said position sensing receiver provides coordinates for the added destination to said user modifiable database.

3. The navigation system as defined in claim 2 wherein said user modifiable data base is contained in a memory card and the user interface means includes means for transferring said coordinates from said position sensing receiver to said user modifiable database.

4. The navigation system as defined in claim 3 wherein said coordinate transfer means includes a pushbutton that actuates transfer of coordinate data from said position sensing receiver to said user modifiable data base.

5. The navigation system as defined in claim 4 wherein said user modifiable data base includes a portion that is non-modifiable and the non-modifiable portion is contained in said memory card accessed via a memory card interface.

6. The navigation system as defined in claim 3 wherein said coordinate transfer means includes a rotary pushbutton switch that is rotatable for selecting available memory locations and axially depressible for storing a user specified destination in one of the available memory locations.

7. The navigation system as defined in claim 5 wherein said pushbutton for storing the current position as a user specified destination is a rotary pushbutton switch that is rotatable for selecting available memory locations and axially depressible for storing the current position as said user specified destination.

8. A method of providing navigational assistance to a mobile user of mapless navigation system, said method comprising the steps of:

receiving GPS signals containing position latitude and longitude information on current position of the mapless navigation-system;

providing a memory card in the mapless navigation system having a user modifiable data base thereon containing latitude and longitude coordinates and associated identifying destinations therefor;

providing an identifying destination for association with the current position latitude and longitude coordinates;

storing the identifying destination in association with its current position latitude and longitude coordinates in the user modifiable data base;

selecting one of the stored identifying destinations and its associated coordinates from the user modifiable data base;

determining a distance and a direction from the current position to the selected coordinates; and

displaying the determined distance and a direction pointer indicating the direction from the current position to the selected coordinates on a mapless display.

9. The method as defined in claim 8 further comprising the step of reading categorized destinations and corresponding latitude and longitude position coordinates of the categorized destinations from the user modifiable destination data base stored on said memory card.

ART-UNIT: 3663

PRIMARY-EXAMINER: Cuchlinski, Jr.; William A.

ASSISTANT-EXAMINER: Mancho; Ronnie

ABSTRACT:

There is provided a pedal apparatus for vehicles, which comprises a pedal reaction-force addition means 4 for adding a reaction force to a pedal 1 of a vehicle, a pedal force detection means 2 for detecting a force added to the pedal 1, a pedal reaction-force control means 3 for adjusting the output of the pedal reaction-force addition means 4. During the running of the vehicle, the pedal reaction-force control means 3 performs the adjustment of a reaction force of the pedal on the basis of the driving environment of the vehicle and the driver's intention and judgement in pedal operation in the driving environment, whereby it is ensured that when the driver has no intention of operating the pedal, the driver can sufficiently place his or her foot on the pedal and that when he driver has any intention of operating the pedal, the driver can realize a smooth pedal operation.
